# The new chest harness

Simple height adjustment for El Mudo's Pivot

Full assembly, set up with cords and carabiners

## WHAT IT IS FOR

It is designed to simplify height adjustment for El Mudo's Pivot.

| | |
|---|---|
| **Positions the Pivot** | Brings it to its ideal working position. |
| **Keeps it clear of the body** | Moves the Pivot away from El Mudo's CORE body. |
| **Adjusted only once** | To each wearer's size and build. |

## MATERIALS AND WEIGHT

| | |
|---|---|
| **PETG buckles** | Its buckles are made of PETG plastic, with enough strength for its intended use. |
| **Much lighter** | That material is what makes the harness much lighter to wear. |

> **It is not designed to withstand falls**
> Its only purpose is to orient the Pivot to its ideal position and keep it away from El Mudo's CORE body.

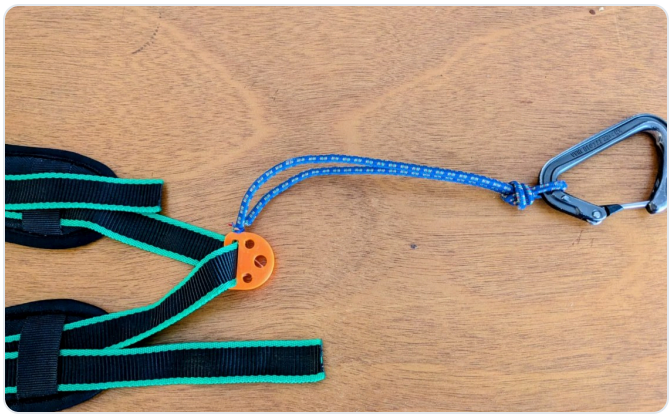

## ADJUSTMENT AND USE

1. **Adjust**
   Set the harness to the size and build of the wearer.
2. **Forget**
   Once adjusted, there is no need to adjust it again.
3. **Put it on**
   It goes on like a T-shirt, and that is all.

## DETAILS

**Front**
Orange front plate: it gathers the chest webbing and takes the cord running to the carabiner.

**Back**
Rear plate with the elastic cord running to the carabiner.

### REAR ATTACHMENT TO THE MAIN HARNESS

We recommend making it with an **elastic cord**, short enough to guarantee that the chest harness does not ride forward.

## IN THE BOX

Cords and carabiners are **not included** in the package.
